

Dynamics 365 Rules

**Do What You
Do Best and
Leave the
Coding to Us**

Make configurations in a fraction of the time without complicated coding or expensive customizations. Perfect for the System Analyst or CRM Admin. Spend your valuable time where it counts the most—designing solutions that work—not searching the internet for snippets of code to use.

Quotes

“CRM Rules is a very solid product that supplied me with the tools to easily apply Java Script through our entire CRM environment.”

CRM Admin,
Seattle Seahawks
[re: Previous version]

Microsoft Dynamics 365 customization and configuration without the coding

Easily Configure Interactive Forms in Microsoft Dynamics 365

Stop Customizing and Start Configuring

Customizing is expensive and complicated. Dynamics 365 Rules lets you easily configure form behavior by simply entering your criteria into an easy-to-use form. Dynamics 365 Rules takes your requests and generates SDK-compliant JavaScript.

Save Time and Money

Configuration requests can now be handled by the System Administrator. Perfect for the CRM Admin, System Analyst, Citizen Developer, and anyone else who is not familiar with JavaScript or advanced customizations. Complete user enhancement requests, system changes, and other requirements faster while creating a better user experience.

More Powerful than Business Rules

Business Rules is a great start, but is highly limited. Dynamics 365 Rules has 'ELSE' and 'OR' statements and allows the user to reuse conditions or actions. With hundreds of prebuilt conditions and actions, Dynamics 365 Rules is more powerful, flexible, and advanced than Business Rules.

Technical

- Works with Microsoft Dynamics 365
- Works with the new Unified Interface forms in Dynamics 365 apps
- Resides entirely within your CDS as a managed solution
- Built using OOB configuration of custom entities and .net plug-ins and the JavaScript produced by our app
- Create an unlimited number of rules
- Preserve institutional knowledge and reduce Total Cost of Ownership by storing your business logic in a searchable CDS database
- Edit generated code by hand or by using the app

Dynamics 365 Rules

Dynamics 365 Rules

The Full Suite contains all of the rules and rule types below:

- Show Field
